

SUPPLEMENTARY DATA

Edge Density Imaging Identifies White Matter Biomarkers of Late-Life Obesity and Cognition

Maxwell Bond Wang¹⁻³, Farzaneh Rahmani^{4,5}, Tammie L. S. Benzinger^{4,5}, Cyrus Raji^{4-6*}

SUPPLEMENTARY DATA

Supplementary Figure 1. Correlation results from validation of coefficients from ADNI-based models using OASIS-4 participants.

Footnote: Correlation statistics are represented by R and p-values for each model. Colors reflect the sign and magnitude of the coefficient of each WM tract in each model. Model 1 included the weighted sum of FA/EDI values only, while Model 2 incorporated age, sex as covariate

Abbreviations: FA: fractional anisotropy; EDI: edge-density imaging index; BMI: body-mass index
